Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-9 are rejected under 35 U.S.C. 103(a) as being unpatentable over Matsushita (US 5901238) in view of Paff et al (US 5430511).

With respect to claim 9 (exemplary claim), Matsushita discloses a iris recognition system that includes a camera (see figure 1 numerical 13) taking a wide view of the image (see col. 3, lines 55-57 taking the image of the face) and the narrow view of the region in the image (see col. 3, lines 55-58, taking the image of the iris) photograph direction control means for defining the photographing direction of the photograph (see col. 3, lines 45-58, the camera takes the image of the face and then find the position of the eye and control module lets the camera known to get the image of the iris using the zoom (narrow view)), identifying the person (see figure 5). However, he fails to disclose the pan tilt control mechanism, as claimed. Paff teaches controlling the pan tilt, (see col. 4, lines 51-55) as claimed.

It would have been obvious to one ordinary skilled in the art at the time of invention to simply combine the references, because the main references does suggests that the apparatus or the system does has the view moving mechanism, and the teaching of the

Paff does help the apparatus to provide a controller with easy access and comfortable use, (see col. 2, lines 20-32 of Paff).

Claims 1-8 are rejected for the same reasons as set forth in the rejection of the most specific/ narrow claim (exemplary claim 9).
